

Pokud je @grenadeck® vystaven přímému slunečnímu záření (při venkovní teplotě vyšší než 25 °C), může povrchová teplota výrobku výrazně stoupnout. V těchto případech doporučujeme @grenadeck® před stykem s pokožkou lehce zastínit nebo ochladit vodou (hlavně u tmavých odstínů).

Falls @grenadeck® am direkten Sonnenschein ausgestellt ist (bei Außentemperatur höher als 25°C), kann die Temperatur die Oberfläche ausdrücklich steigen. In diese Fälle empfehlen wir @grenadeck® bevor dem Kontakt mit Haut abschirmen oder mit Wasser erkälten.

Surface temperature of @grenadeck® may become excessive when exposed for long period to full sun or when outside temperature exceeds 25 °C. In such cases, we recommend @grenadeck® shade. If not, cool down it with cold water before exposing to bare skin.
